PC1:

The screenshot shows a 'Configure Mail' dialog box with a blue title bar and a close button (X). The dialog is divided into three sections: 'User Information', 'Server Information', and 'Logon Information'. Each section contains input fields for various mail configuration parameters. At the bottom, there are four buttons: 'Save', 'Remove', 'Clear', and 'Reset'.

Section	Field Label	Value

Task 2

Create topology.

```
Cisco Packet Tracer PC Command Line 1.0
C:\>ftp 192.168.1.2
Trying to connect...192.168.1.2
Connected to 192.168.1.2
220- Welcome to PT Ftp server
Username:cisco
331- Username ok, need password
Password:
230- Logged in
(passive mode On)
```

Creating a file :

hello world

File Name

Enter the new File Name

myFile.txt

 Cancel  OK

File

30

ir800_yocto-1.7.2.tar

31

ir800_yocto-1.7.2_python-2.7.3.tar

32

myFile.txt

33

pt1000-i-mz.122-28.bin

34

pt3000-i6q4l2-mz.121-22.EA4.bin

Remove

Now upload the file from the Laptop

```
(passive mode On)
ftp>put myFile.txt

Writing file myFile.txt to 192.168.1.2:
File transfer in progress...

[Transfer complete - 12 bytes]

12 bytes copied in 0.076 secs (157 bytes/sec)
ftp>?
```

5	index.html	(edit)	(delete)
6	myFile.txt	(edit)	(delete)

Task 3: Create and Upload html file to HTTP server directory Using FTP

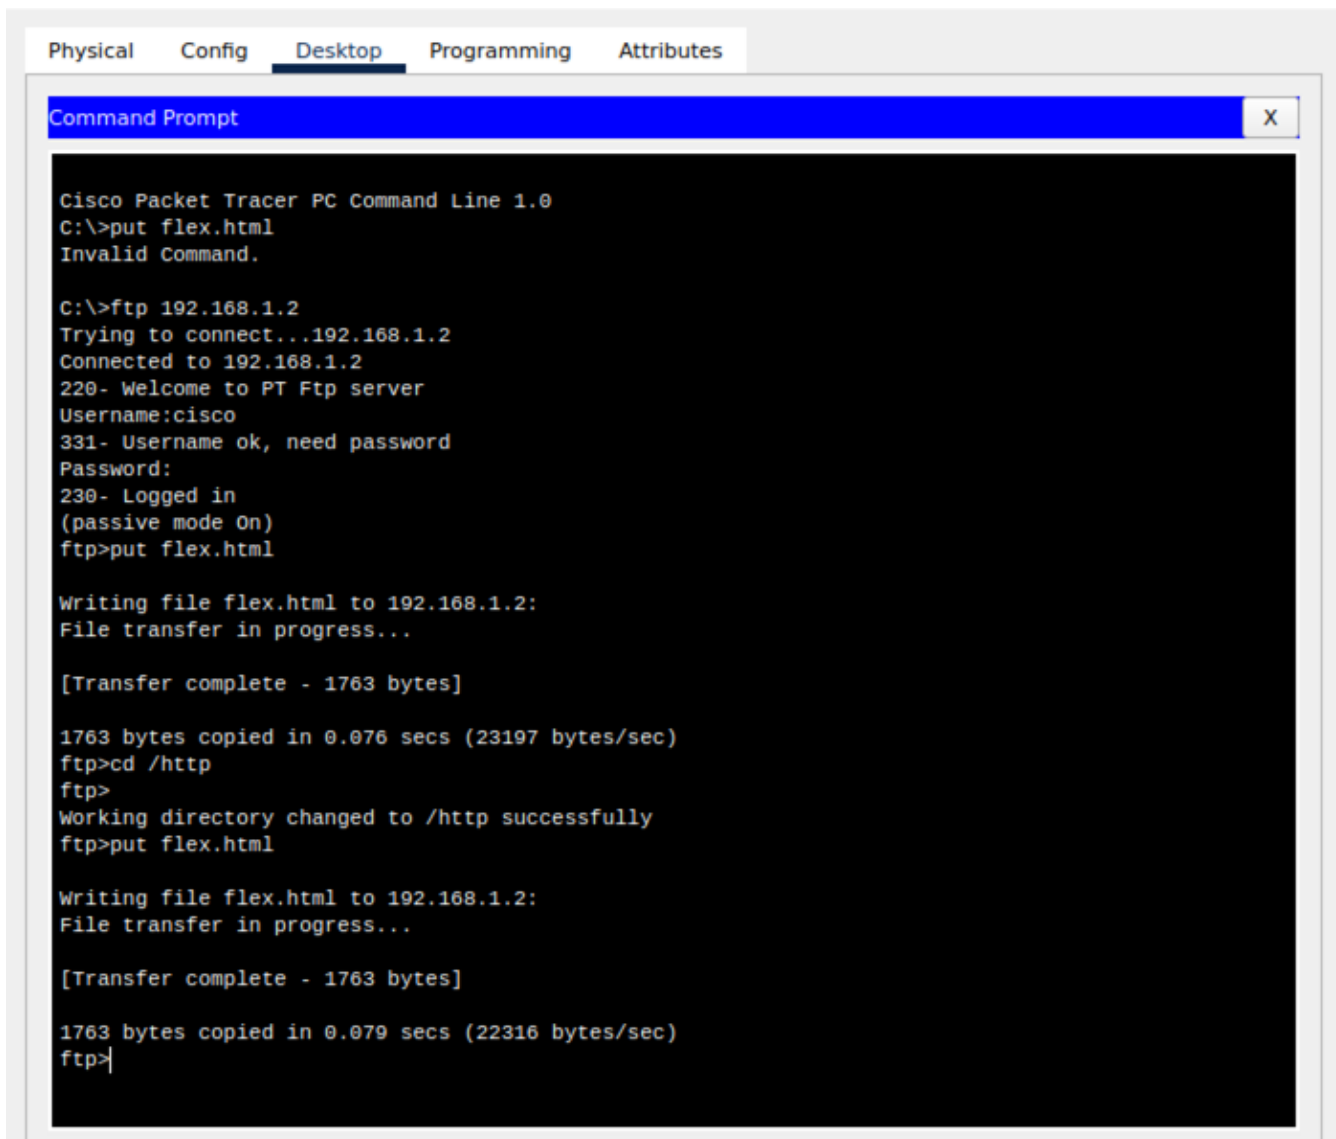

creating the following topology

Create an html file

Upload the html file onto the HTTP directory.

The screenshot shows a Cisco Packet Tracer PC Command Line window with tabs for Physical, Config, Desktop, Programming, and Attributes. The Desktop tab is active, displaying a black command prompt window titled "Command Prompt". The text in the window shows a user attempting to upload a file named "flex.html" to a remote server at 192.168.1.2 using FTP. The initial attempt to use the "put" command fails. The user then initiates an FTP session, logs in with the username "cisco", and successfully uploads the file to the "/http" directory. The transfer is confirmed as complete with a size of 1763 bytes.

```
Cisco Packet Tracer PC Command Line 1.0
C:\>put flex.html
Invalid Command.

C:\>ftp 192.168.1.2
Trying to connect...192.168.1.2
Connected to 192.168.1.2
220- Welcome to PT Ftp server
Username:cisco
331- Username ok, need password
Password:
230- Logged in
(passive mode On)
ftp>put flex.html

Writing file flex.html to 192.168.1.2:
File transfer in progress...

[Transfer complete - 1763 bytes]

1763 bytes copied in 0.076 secs (23197 bytes/sec)
ftp>cd /http
ftp>
Working directory changed to /http successfully
ftp>put flex.html

Writing file flex.html to 192.168.1.2:
File transfer in progress...

[Transfer complete - 1763 bytes]

1763 bytes copied in 0.079 secs (22316 bytes/sec)
ftp>|
```

Check whether the html file uploaded has been received in the HTTP directory:

TFTP

DNS

SYSLOG

AAA

NTP

EMAIL

VM Management

Radius EAP

File Manager

	File Name	Edit	Delete
1	copyrights.html	(edit)	(delete)
2	cscoptlogo177x111.jpg		(delete)
3	flex.html	(edit)	(delete)
4	helloworld.html	(edit)	(delete)
5	image.html	(edit)	(delete)
6	index.html	(edit)	(delete)
7	myFile.txt	(edit)	(delete)

Edit html file in the HTTP directory

Now edit index.html file in the HTTP directory so as to include a link to flex that we've just uploaded. This will make flex accessible from the Laptop's browser. To do this, locate index.html then click edit. Proceed to edit it as shown below. Then save and accept overwrite.

File Name: index.html

```

<html>
<center><font size='+2' color='blue'>Cisco Packet Tracer</font></center>
<hr>Welcome to Cisco Packet Tracer. Opening doors to new opportunities. Mind Wide
Open.
<p>Quick Links:
<br><a href='helloworld.html'>A small page</a>
<br><a href='copyrights.html'>Copyrights</a>
<br><a href='image.html'>Image page</a>
<br><a href='cscoptlogo177x111.jpg'>Image</a>
<br><a href='flex.html'>Flex Login</a>
</html>

```

Finally, try to access the newly uploaded file from the Laptop's browser.

Click flex link to view the contents of the file in the browser.
